TABLE OF CONTENTS

ENHANCEMENTS AND REPAIRS

⌃ Pinnacle Series
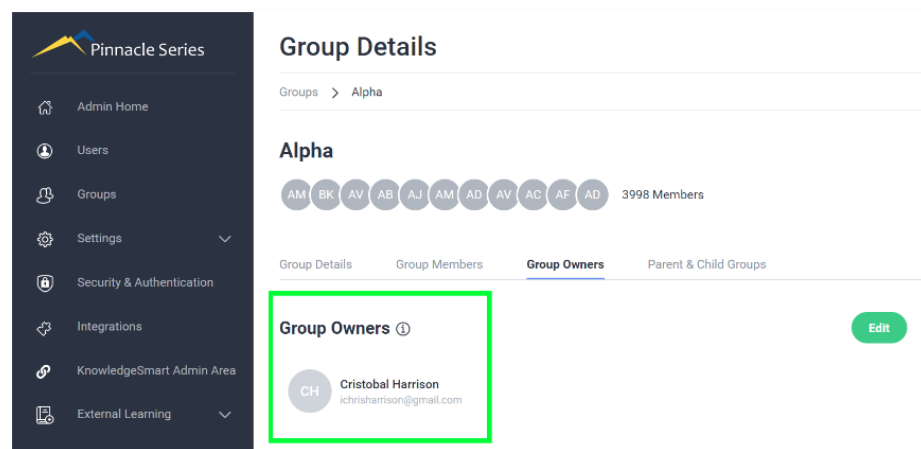

Browser Admin and Management Utility

The Administration Portal for Pinnacle Series allows your administrators to manage users and groups through a browser portal.

The Pinnacle Series Management utility is a Desktop Application that is required for Pinnacle Series Administrators and Managers to set up, configure, and maintain the Pinnacle Series Platform.
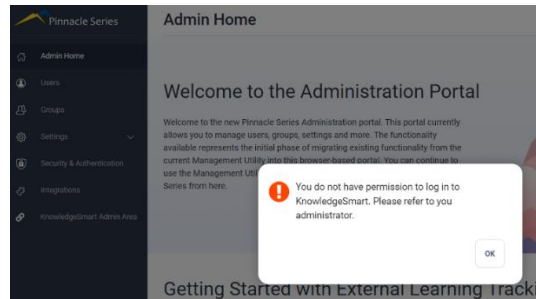

⌃ Repairs:

✓ **Filter button not responsive when trying to add an Owner to a group**

   o When trying to add an owner to a group, the Filter button on the "Add Owners to Group" window was clickable, but unresponsive. This was isolated to the "Add Owners to Group" window, as it worked fine when trying to add Group Members.

✓ **KnowledgeSmart Admin Area Button > Typo in permission error**

o When selecting the 'KnowledgeSmart Admin Area' button in the admin portal, if the user does not have access, it will prompt an error stating "You do not have permission to log in to KnowledgeSmart. Please refer to you administrator". This message has now been updated.

Enhancement

✓ **Request to add option to output Automatic Azure AD Sync Log File for Customers**

o A new endpoint was developed to make it easier for customers to review AD Sync files. A new endpoint was developed to make it easier to review the AD Sync log files. This new endpoint is under the "UserSynchronization" section with the title of "GetADSyncLogData". The API needs the Authorization token that is received from the /api/v2/authorization endpoint.

o **Permission Required:** Administrator permissions.
The endpoint uses parameters to limit the AD Sync logs that are returned. The first parameter is "logType" and the valid values for this parameter are: All, Add, Full and Modify. It will default to "All" if a valid value isn't sent. All will return every qualifying log regardless of the log type. Full will return all full logs from the automatic AD Sync process. The "Add" or "Modify" log types will return all logs based on the type selected from the manual AD Sync process.

o A date range can also be used to narrow down the logs that are returned. The user can enter a date range, otherwise the endpoint will default to a 30-day date range based on the current date. When a date range is entered, both the from and to dates are required and it must be a valid date range.

o The new endpoint was used to build a new application in the Admin Portal to be able to view the logs there.

External Learning Tracking

This functionality helps your organization expand the value you achieve from Pinnacle Series by offering you the opportunity to track learning completed outside of Pinnacle Series.

- Webinars, trade-show master classes, compliance training – track alongside your e-learning.

Enhancement:

✓ **We updated the External Learning Tracker export logic so that groups are now included in the export.**

- o Included Group(s) in the file export when there are 1 or more groups assigned.
- o If no assigned group, then the column will be empty.

KnowledgeSmart
