ENHANCEMENTS AND REPAIRS

Pinnacle Series

Browser – User Tools – Related Learning Plugin

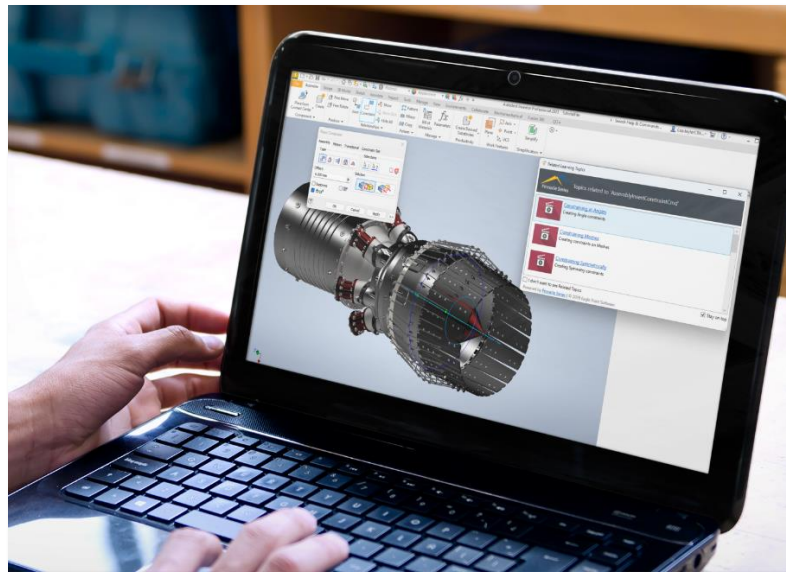

The Pinnacle Series User Tools are a packaged set of small applications that get deployed to end-user systems for added platform functionality. Included in the User Tools are the Pinnacle Command Launcher and the Offline Viewer. The Pinnacle Series Command launcher is a thin client application used to establish bi-directional communication between Pinnacle Series and Autodesk products. The Command Launcher installation unpacks "plug-ins" that allow Pinnacle Series tool links to trigger Autodesk commands. These same plugins also allow the Pinnacle Series to access Related Learning Topics when a user clicks a command, in certain Autodesk products.

Repairs:

✓ **Pinnacle User Tools - Inventor RLT 2024**

- Pinnacle User Tools > Related Learning Topics: RLTs in Inventor 2024 were not working for some users; a .dll file was not being created. This has now been fixed.

Browser – Manage Content

Pinnacle Series content managers can configure custom quizzes within the manage content area of the management utility.

Repairs:

✓ **Quiz Answer Translation**

- When translated, quiz answer options were not showing up for users. Only the question text is displayed. This has now been corrected.

KnowledgeSmart

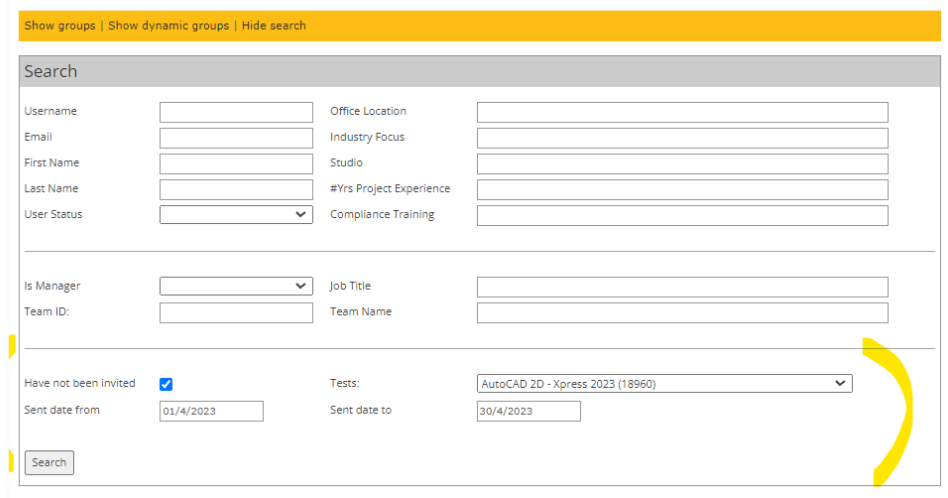

KnowledgeSmart

KnowledgeSmart Enhancements

✓ **User Administration - Searchability**

- We updated the search logic on the Users > User list page, making it easier to identify which users have not been sent an invite to a particular assessment, for a specific date range.

Users

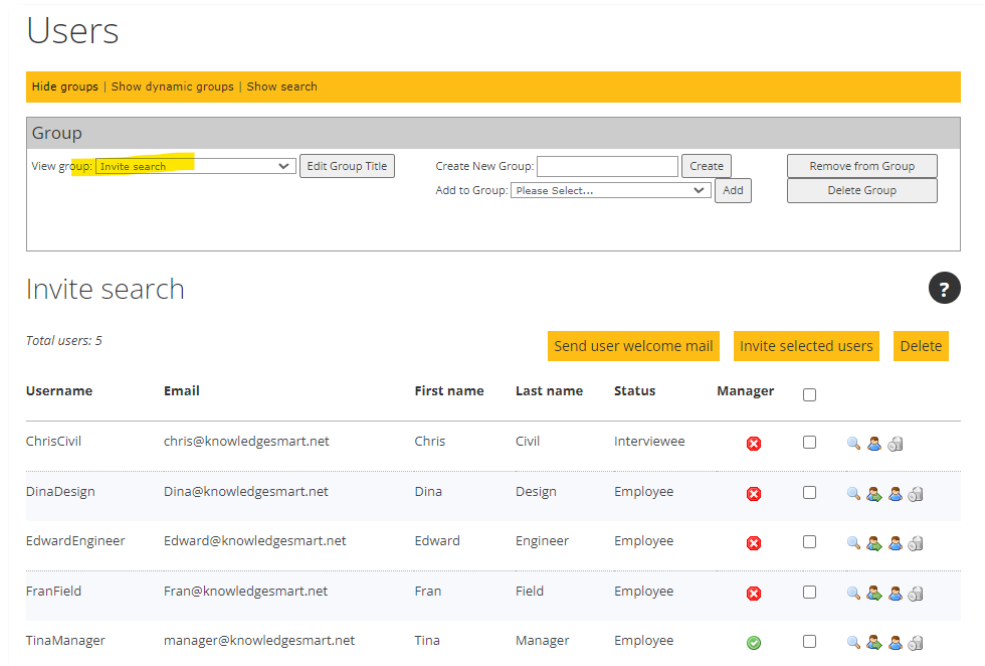

The screenshot shows the 'Users' management page with a search filter section. The search filters are organized into several rows:

- Row 1:** Username, Office Location, Email, Industry Focus, First Name, Studio, Last Name, #Yrs Project Experience, User Status (dropdown), Compliance Training.
- Row 2:** Is Manager (dropdown), Job Title, Team ID, Team Name.
- Row 3:** Have not been invited (checkbox checked), Tests (dropdown menu showing 'AutoCAD 2D - Xpress 2023 (18960)'), Sent date from (01/4/2023), Sent date to (30/4/2023).

A yellow arrow points to the 'Have not been invited' checkbox and the date range filters.

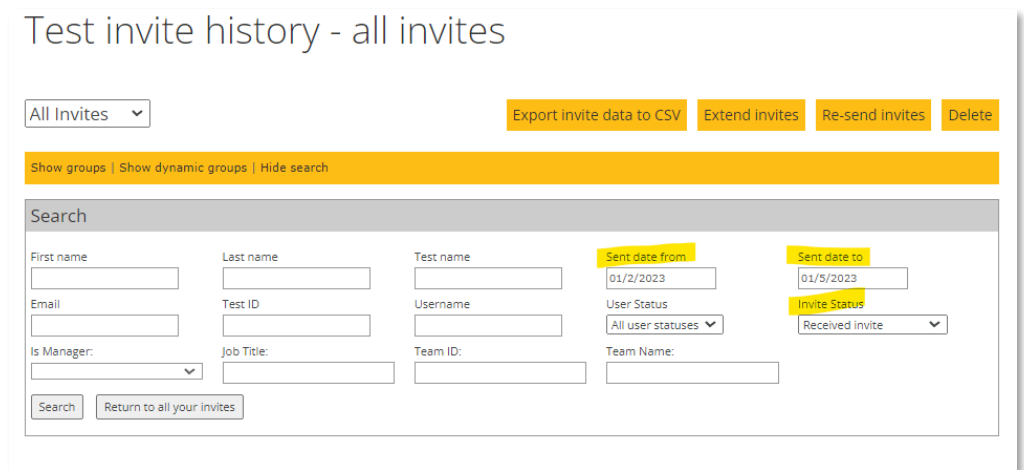

- Search results can easily be captured in a static group, for analysis or exporting.

Username	Email	First name	Last name	Status	Manager
ChrisCivil	chris@knowledgesmart.net	Chris	Civil	Interviewee	<input checked="" type="checkbox"/>
DinaDesign	Dina@knowledgesmart.net	Dina	Design	Employee	<input checked="" type="checkbox"/>
EdwardEngineer	Edward@knowledgesmart.net	Edward	Engineer	Employee	<input checked="" type="checkbox"/>
FranField	Fran@knowledgesmart.net	Fran	Field	Employee	<input checked="" type="checkbox"/>
TinaManager	manager@knowledgesmart.net	Tina	Manager	Employee	<input checked="" type="checkbox"/>

✓ **User Administration – Invite Management**

- On the Test > Invites > History page, we added an invite received/not received filter and a new invite sent date range filter for test invites.

- This makes it easier to identify which users have (or have not) been sent an invite to an assessment, for a specific date range.
- Search results can easily be captured in a static group, for analysis or exporting.

- o This filter has also been added to the Survey > Invites > History page.
